

## Press Release

### Welcome

This press release is provided by Dynamic Interface Systems Corporation (DISC), creators of **LOANLEDGER++**, the world's leading supplier of loan servicing software for microcomputers. Since 1982, DISC has provided loan software, collection software and other sophisticated yet affordable products for lenders and financial institutions. Nearly half of Fortune 100 Companies use **LOANLEDGER++**.

To find out how **LOANLEDGER++** Loan Servicing Software can greatly enhance all of your lending activities, please call **(310) 568-4567**.

### Rising Delinquencies: Do You Have a Defense?

Accelerated delinquencies and charge-offs. When it comes to these subjects, and more, how important is loan servicing software to your portfolio? If recent money market fluctuations are a signal that the economy is heading down, your portfolio is likely to experience problems.

Your loan management system is the only protection you have from unrecoverable losses. Can your current system provide the critical support you need? If your current system is outdated or has holes, they will become canyons when delinquencies escalate. Just how wide or deep they become is up to you.

The only defense is an upgraded loan management system, and your strength is in the software driving your PCs. You may have thought about upgrading your loan servicing system, but, absent any significant losses, decided it was acceptable to delay. When your portfolio is performing profitably and losses can be absorbed, it's easy to overlook the inevitable until you are faced with a genuine crisis. DISC's software can help you avoid loan portfolio turmoil while making your organization more productive.

Dynamic Interface Systems Corporation (DISC), the world's largest provider of micro-computer loan-servicing software, has launched a website, <http://www.servicingsoftware.com/> on the Internet. The site offers extensive information on DISC's PC-based loan-servicing software. In fact, DISC has loan-servicing systems on more networks and micro-computers than any other company in the world.

The experience and reliability of the manufacturer is an important consideration when choosing loan servicing software. Now in its 15th year, financial PC software has always been the exclusive focus at DISC, not a sideline business. **LOANLEDGER++** is a full-featured program that mortgage bankers, finance companies, banks and general servicers use to

get closer to their borrowers and prospects. It can save you in bad times and lift profits higher when times are good.

Unlike some systems that are merely database managers adopted for the financial services industry, **LOANLEDGER++** was conceived and developed from the ground up by experts within the financial community. A comprehensive on-line, real-time system, **LOANLEDGER++** is so smart, it keeps you a step ahead of competitors with important features like reporting capabilities, audit trails, agings, detailed customer histories, transaction reports, required government reports and a variety of management analyses. You can even design your own customized reports.

But while **LOANLEDGER++** is sophisticated, it is also surprisingly easy to learn. It puts your people in a comfortable environment that allows them to be more productive immediately, yet it is impossible to outgrow. That's because **LOANLEDGER++** can be combined with an extensive line of fully integrated support programs that are just as intuitive and comprehensive as **LOANLEDGER++**. The programs work together so you can start with the system you need now, and as your portfolio grows, you can add more capabilities when the need arises.

DISC has an excellent reputation for its **LOANLEDGER++** software as well as its customer service. Find out why. Check out our new web site for detailed information on **LOANLEDGER++** programs.
